AI & design

Claude API
OpenAI API
AI-assisted dev Figma
Photoshop Illustrator

WORKING KNOWLEDGE

Node.js REST APIs
MongoDB PostgreSQL
Docker Vercel
LaunchDarkly

FAMILIAR

Microfrontends
Module Federation

ABOUT

Senior frontend engineer with 20 years in the field, the last 11 of them on a single product — **HomeStory**, a white-label home-search and agent-matching platform now live for 15+ U.S. financial institutions including Pennymac, SoFi, Citizens Bank, Fifth Third, Capital One, Fidelity and LendingTree. I've personally shipped every partner edition's frontend, all at WCAG AA or AAA.

I work in React, Next.js and TypeScript at scale, on multi-tenant platforms where each partner is its own tenant on shared underlying code. I came into engineering from graphic design, which shapes how I work — I care about visual correctness and interaction detail, not just whether something compiles. Comfortable enough on the backend (Node, REST, SQL/Mongo) to ship full features end to end without blocking - something I currently practice on my own SaaS boilerplate, **Athletix**, alongside its mobile companion in React Native and Expo.

EXPERIENCE

Senior Frontend Engineer

Jul 2014 – Present

HomeStory (formerly Vast.com — rebranded 2020)

HomeStory is a white-label home-search and agent-matching platform embedded by U.S. banks and lenders on their own sites. End users come from a partner like Pennymac or SoFi, search tens of thousands of properties, and get matched with a real estate agent — generating mortgage leads and referral revenue for the bank.

- Joined the core team that built HomeStory from the ground up; the platform now serves 15+ partner editions live in production (Pennymac, SoFi, Citizens Bank, Fifth Third, Capital One, Fidelity, LendingTree, RBC, and others)
- Owned the **frontend architecture** — React/Next.js on a multi-tenant system (originally built on Module Federation) where each partner is a tenant on shared code, with per-partner branding, configuration and feature flags
- Built **HomeStory Admin** from inception — internal tooling the business uses to onboard new partners, configure each partner's site, manage content, and orchestrate features via LaunchDarkly
- Owned **accessibility** across the platform — every partner edition ships at WCAG AA or AAA, which matters because these are regulated financial institutions
- Owned **partner onboarding** on the frontend — every new bank's edition has been set up and shipped through me

Lead UI Designer & Frontend Developer

Apr 2012 – Jul 2014

AWS CDK DynamoDB

S3 CloudFormation

High Tech Engineering Center

- Led UI design and frontend development for enterprise applications
- Established frontend architecture standards and reusable component systems

• Web Designer / Frontend Developer

2005 – 2012

Eutelnet · Tehnicom Solutions · Wireless Media · Infonetgroup

- Built mobile portals and websites for regional telecoms including Qtel (Qatar) and Nawras/Ooredoo
- Progressed from print and graphic design into interactive web, mobile portals and e-commerce

• Freelance Frontend Developer

Various

Independent

- Built TheScope — a targeted content delivery platform
- Built Fr8Hub — freight management software
- Frontend development for Celsius Network crypto platform
- React/Redux developer for HERO Health

NOTABLE PROJECTS

HomeStory — multi-tenant real estate platform

White-label home-search and agent-matching used by 15+ U.S. banks (Pennymac, SoFi, Citizens, Fifth Third, Capital One). Multi-tenant architecture; tens of thousands of properties. I own the frontend architecture, accessibility, and partner-onboarding work.

React Next.js Multi-tenant WCAG AAA

Athletix — SaaS platform with mobile companion

My own production-grade Next.js SaaS boilerplate. Turbo monorepo with JWT auth, role-based access control, a 60+ component UI library on Radix primitives, CSS Modules with design tokens, and a marketing app alongside the main product. Currently building the mobile companion in React Native and Expo, designed in Figma. This is where I work full-stack end to end.

Next.js TypeScript Turbo monorepo
React Native Expo MongoDB
